MALE PERFORMANCE ENHANCEMENT\*

**Suggested Use:** As a nutritional supplement.  
Take 1 capsule daily with or without food.

## Supplement Facts

Serving Size: 1 Capsule  
Servings Per Container: 150

	Amount Per Serving	% DV†
Proprietary Blend L-Citrulline, St. John's Wort Herb Extract	700 mg	†

† Daily Value (DV) not established

**Other Ingredients:** Hypromellose (Capsule),  
Microcrystalline Cellulose.

- **Premature ejaculation** is a common condition that affects one out of every four men between 20 and 50.
- Low levels of **Serotonin** in the brain have been associated with rapid ejaculation.
- A natural extract of **St. John's Wort** called **Hyperforin** has been demonstrated pharmacologically to inhibit serotonin reuptake and delay ejaculation.
- Combined with the potent **Nitric Oxide Booster**, L-Citrulline, one tablet of **PreLONG** per day will help you go Longer and Stronger without the side effects of SSRI anti-depressants like sedation, anticholinergic reactions, gastrointestinal disturbances and sexual dysfunction.

Take one capsule per day with or without food and within two weeks you will begin to notice improvement. If there is minimal improvement, you will want to increase your dose to one capsule twice a day. Side effects from St. John's wort are generally uncommon and mild and include stomach upset, skin rashes, fatigue, restlessness, headache, dry mouth, and feelings of dizziness or mental confusion. St. John's wort can also make the skin overly sensitive to sunlight called photo dermatitis. Suddenly discontinuing St. John's wort therapy may cause unpleasant side effects. Gradually lower the dose before stopping.

Do not take if you are taking Antidepressant medications or you have bipolar disorder. Because of the way St John's wort is metabolized, it may affect the blood levels of other medications that you are taking. Please consult your physician if you take Warfarin, blood pressure or anti-epileptic medications.
